

# ASSIST

Ready at hand to help the elderly and disabled of society.

# TARGET AUDIENCE

---

1

## Elderly

Prone to more accidents.

2

## People who Live Alone

Need help reaching emergency medical assistance.

3

## Disabled

Individuals with difficulty taking care of themselves

# Our Solution

## Immediate Service

Automated call to **911** and the appropriate services

## Effective Communication

Instant automated alerts to selected **emergency** contacts.

## Cellular Integration

All the technology easily integrated into a simple mobile **device**.

## Simple Interface

Specifically designed to present audience with a **clean and simple** design.

# ASSIST

An illustration of two stylized human figures. A green figure stands on a flat surface, reaching out to help an orange figure who is climbing a red ramp. The word "ASSIST" is written in large blue letters to the left of the figures.

# KEY FEATURES

- Accelerometer for fall measurements
- Selective contacts for emergencies
- Instant connection to dispatch
- Family and friends notification via automated text
- Geolocation utilized by global coordinate system
- Utilized material design principles

Create an “accident”

Watch automated text  
and call features

Get all family and friends  
connected to the emergency

# Demo

01

# INTO THE CODE

How the program functions.

# INTO THE CODE

## Motion Detection

- Flutter Sensors API

## Call + Messaging

- SmsManager

## Location Data

- Google API
- Google Play Services

## SDKs

- Android
- Flutter
- Dart

The background is a stylized illustration with a purple and blue color palette. It features a close-up of a computer keyboard in the lower-left corner, a computer mouse in the lower-right corner, and a network of glowing lines and binary code (0s and 1s) floating in the background, suggesting a digital or technological theme.

02

# Technical Difficulties

How we overcame obstacles.

# TECHNICAL DIFFICULTIES

- Accessibility to native Android features
- Connecting the GUI to the XML
- Accessing and implementing the Location Services
- Google search engine shutdown

03

# UI Design

Displaying a simple interface to the user with many complicated features.

# UI DESIGN

- Simple interface necessity
- Storing contacts
- Emergency notifications
- Icon design

04

# Future Addressments

How can we improve the app in the future?

# FUTURE ADRESSMENTS

- Seizure detection
- Family functions
- Emergency contact auto-group chat
- Google Maps integration
- More customization (ex. emergency delay time)
- Free to all on app store

05

# Progress and Learning

What did we learn during the development process?

# PROGRESS AND LEARNING

## Technical Skills

- App Development
- Android Studio
- Java
- XML
- Google and Sensor APIs

Thank you  
for listening!
